

Inside Calipers

ID

Calipers are one of the oldest type of comparative measuring tools

Designed for taking comparative measurements and transferring the dimensions to a micrometer, precision rule etc.

Manufactured from selected steel, calipers have a spring joint for precision settings

Legs pivot on a roller and are tensioned by bow spring. The fulcrum stud with a large bearing surface that prevents side deflection of legs

Adjustment is made by opening and closing of the legs by means of an adjusting nut

Extra long sizes 14" (350 mm) - 24" (600 mm) can be made on order

Inside Caliper:
Used to measure the internal diameter of a cylinder
